MEASURING COAT SIZE

The coat size is the same as the chest measurement. For comfort fit add 1 inch. See below for instructions on measuring the chest. Is also the usual size of the jacket you wear.

MEASURING COAT LENGTH

Standing upright, measure from the upper middle of the shoulder; a good reference for the starting point is the shoulder seam of your shirt.

Measure straight down to the middle of the thumb, or where you want the jacket to end.

You can also double check this measurement on one of your own jackets, wearing your well-fitting jacket as in the picture.
